FIG. 2

FIG. 3A

FIG. 3B

FIG. 4 is a perspective view of the device 10 in a closed position. The device 10 includes a main body 14 and a handle 16. The main body 14 has a top surface 18 and a bottom surface 20. The handle 16 is connected to the main body 14 at a pivot point 22. The handle 16 has a top surface 24 and a bottom surface 26. The device 10 is shown in a closed position, where the handle 16 is folded against the main body 14. The device 10 is also shown in an open position, where the handle 16 is extended away from the main body 14. The device 10 is made of a material that is flexible and durable. The device 10 is used to hold and transport objects. The device 10 is shown in a perspective view, which is a view from an angle that shows the three-dimensional shape of the device 10. The device 10 is shown in a closed position, which is a position where the handle 16 is folded against the main body 14. The device 10 is also shown in an open position, which is a position where the handle 16 is extended away from the main body 14. The device 10 is made of a material that is flexible and durable. The device 10 is used to hold and transport objects. The device 10 is shown in a perspective view, which is a view from an angle that shows the three-dimensional shape of the device 10.

FIG. 5

FIG. 6 is a perspective view of a portion of the structure 14, showing a series of vertical members 60 and 64, and horizontal members 54 and 82, all connected by a top rail 90 and a bottom rail 90. The structure 14 is shown in a perspective view, with the top rail 90 and bottom rail 90 being the upper and lower rails, respectively, and the vertical members 60 and 64 being the side rails. The horizontal members 54 and 82 are the top and bottom rails, respectively, and the vertical members 60 and 64 are the side rails. The structure 14 is shown in a perspective view, with the top rail 90 and bottom rail 90 being the upper and lower rails, respectively, and the vertical members 60 and 64 being the side rails. The horizontal members 54 and 82 are the top and bottom rails, respectively, and the vertical members 60 and 64 are the side rails.

FIG. 7 is a cross-sectional view of the device 10 taken along line A-A of FIG. 1. The device 10 includes a housing 14 and a plurality of components 36, 80, 82, and 90. The housing 14 is shown in cross-section, revealing the internal components. The components 36 are positioned along the top edge of the housing 14. The component 80 is located in the center of the housing 14. The component 82 is positioned at the bottom right of the housing 14. The component 90 is located at the bottom left of the housing 14.
